## ACCREDITATION STATEMENT

### Program Overview & Statement of Need

The field of dermatology is constantly evolving. Physicians and medical professionals must keep current on emerging dermatological issues, techniques, and treatment skills in order to safely and effectively meet their patients' needs. ODAC delivers a comprehensive and compelling look at the practice of dermatology with a strong focus on timely issues affecting dermatological practice. ODAC provides attendees with an understanding of the evolution of both clinical and aesthetic dermatology as a medical and surgical discipline.

### Educational Method

The ODAC conference consists of didactic lecture presentations, case-study review, case-based learning in small groups, simulation-based medical education, live demonstrations and hands-on live patient injections. The ODAC program also has several question and answer opportunities.

### Intended Audience

The intended audience for this live activity includes dermatologists, dermatology residents, fellows and young practitioners, dermatology nurse practitioners and physician assistants, and other physicians with an interest in management of cutaneous diseases, disorders and the aesthetic treatment of adult patients of all skin types.

### Learning Objectives

Upon completion of the ODAC 2019, participants should be able to:

- Define intrinsic and extrinsic factors of the normal aging process in patients with all skin types
- Select and formulate the appropriate aesthetic treatment plan using neurotoxins, dermal fillers, laser and light-based energy therapy technologies and cosmeceutical products in patients of all skin types who seek improvement in facial and skin appearance
- Compare patient selection, choice of injectable products and technique required to avoid potential complications and achieve optimal patient outcomes
- Express current understanding of the pathophysiology of acne as it relates to effective diagnosis and treatment
- Discuss current theories on the pathogenesis of rosacea including the identification of genetic factors and gene loci that predispose affected patients to a rosacea phenotype
- Analyze evidence-based data on acne treatment options in order to improve treatment outcomes and improve patient adherence to therapy
- Examine emerging clinical and therapeutic science insights into the pathogenesis and effective management of atopic dermatitis including new modalities recently introduced into clinical practice
- Discuss the role of the innate and adaptive immune system function in normal skin and how changes in the immune system may contribute to inflammatory disease
- Identify the psoriasis patient population that would benefit most from topical and systemic therapies including biologic response modifiers
- Assess evidence-based data on the relationship between psoriasis comorbidities and therapeutic selection
- Indicate the types of superficial fungal infection presenting in the dermatology setting including tinea pedis, tinea cruris and tinea corporis and onychomycosis and formulate effective treatment strategies

- Summarize current and emerging therapies that hold promise for the effective treatment of skin cancers including actinic keratosis, basal cell carcinoma and melanoma
- Identify the impact of various cutaneous disorders affecting the delivery of quality dermatologic care including seborrheic keratosis and other non-cancerous growths, chronic urticaria, hyperhidrosis among others
- Recognize the impact of race, ethnicity and cultural practices on the treatment of cutaneous diseases in persons with diverse skin types
